Welcome!

Welcome to our fourth annual bull sale. We are offering 35 yearling bulls for sale this year. After going through a couple challenging years, 2025 is shaping up to be a great year in the cattle business. The mild winter and spring have been a blessing for many operations, and both the calf and cull cow market are at all-time highs. With that being said, cows that hold up and last longer in your herd are going to put more profit in your pocket over time. Out of the 35 bulls being offered, only one of their dams was open last fall, and she was a six-year-old cow. We don't sell bulls out of young open cows because those cows are NOT profitable!

The bulls are developed slowly on a low mega-Cal TMR that never exceeds a 50 mega-Cal. We start them out on a 44 mega-Cal at weaning and gradually increase to a 50. We begin backing them down around the first of March depending upon the weather and temperature, and they will be down to a 44 by delivery. We don't push the bulls hard because we don't want them to fall apart during the breeding season. They're developed to last for many years. The average daily gain data you see is not from a "test" period. It is from the time we record weaning weights, at weaning time, until we record yearling weights at the end of February.

We place a lot of emphasis on the mother cow, and that's why we display their age, MPPA, udder and teat score with their son's data. Our cows are pastured in the sand hills of southeastern North Dakota on the edge of the Sheyenne National Grasslands. They are not pampered and must work for a living. We do not under-stock our pastures in an attempt to boost our weaning weights and keep all the cows in good shape. We run our purebred cows at the same stocking rate as our commercial herd so that the data you're seeing is legitimate. This also helps us recognize differences in the fleshing ability of our cows in order to cull those that can't maintain adequate body condition while raising their calf.

We cull hard here, especially for feet. We wouldn't want to buy a bull out of a cow with bad feet or udders and believe that nobody else would either. That's why we never offer progeny for sale out of cows with those traits and avoid breeding to sires known to produce offspring with poor foot quality. It doesn't matter how good their EPD's are. If they have bad feet, they're culled.

Customer satisfaction is our number one goal. We want to know how the bulls are working for you. Give us a call or stop by anytime, and we can discuss which bulls would work best in your operation. Our cowherd is open for viewing year-round, and we'd like to show you the dams behind the bulls.

As always, we stand behind our cattle 100%. Thank you for your interest in our program.

Sincerely,

Klay Oland

Fourth Annual Bull Sale

SATURDAY, MAY 3, 2025

Leonard, North Dakota • 5 p.m. CDT

Location and Directions:

At the Oland Red Angus North Headquarters
5664 149th Ave. SE
Leonard, ND 58052
From Leonard:
2 miles South, 3 miles West, 2 ¾ miles South
From Sheldon:
9 miles East and ¼ mile North

DVAuction

Lunch:

A complimentary sale day lunch will be provided.

View Catalog & Videos Online:

DVAuction.com and Oland Red Angus on Facebook

Sale Order/Supplement Sheet:

Bulls will sell in catalog order. A supplement sheet will be available sale day with carcass ultrasound data and scrotal circumference.

Terms & Conditions:

Terms of the sale are cash. All settlements must be made at the close of the auction unless previous arrangements have been made. The auctioneer will settle any bidding disputes. All persons attending the sale do so at their own risk. The bulls will sell in accordance with the terms and conditions set forth by the Red Angus Association of America.

Ration:

Bulls are developed on a TMR ration of ground hay, earlage, beet pulp, modified dry distillers grain, and mineral supplement. Ration never exceeds a 50 mCal. Formulated by Dr. Richard Roth, DVM.

Delivery:

We will start delivering the bulls shortly after the sale. Free delivery offered for bulls sold into North Dakota, Minnesota and South Dakota. We will cooperate with buyers on delivery of bulls outside of this area, regardless of distance.

Guarantee:

Bulls are guaranteed to your satisfaction and will have passed a semen test before delivery. If any problem arises, a replacement will be provided to use if available as well as credit for next year.

Herd Health:

Our herd is under a complete herd health program utilizing both the Enderlin Vet Clinic and the Lisbon Vet Clinic. Health papers will be issued as needed.

Genetic Testing:

Every bull for sale will be genetically tested for enhanced EPDs, parentage verification, and are free of any known genetic defects.

Semen Interest:

Oland Red Angus is retaining one-half semen interest in all bulls sold.

Cattle Viewing:

Anybody who comes out and views the bulls before sale day will be given \$100 credit per bull purchased. We want to be able to help select the bulls that will best fit your operation.

Online Bidding:

Live online bidding will be available at www.dvauction.com. Please register to bid at least the day before if you plan on bidding online.

About Our Herd

We are firm believers that good bulls come from a strong cowherd. A strong cowherd does not mean cows that only wean a heavy calf or look pretty. In our eyes a strong cow herd should be built upon cows that do wean a heavy calf and look the part themselves, however they also need to be structurally sound in that they have good feet and legs, a sound udder, and correct teat size. They also need to be able to maintain their body condition without requiring preferential treatment, breed back on time, and calve unassisted. We graze our cows on pasture, cover crops, and corn stalks as long as mother nature will allow before bringing them home about a month before calving to supplement them. If a cow can flourish in

our system, we believe that their progeny will work for most operations.

When selecting sires to AI to, one of our stipulations is that they must be at least five years old. A bull's daughters will not have their first calf until he is four. We believe that by waiting until a bull is at least five years old, we will gain valuable information such as how his daughters are for mothering ability, how their udder is developed, if they breed back as second calvers and how their feet are structured. We will also have a good idea of how his sons are accepted in the industry by that point. We aim to produce cattle that last.

Bull Development:

- The lot pictured here is where we develop our bulls and is what we feel sets us apart from the mainstream seedstock producers.
- It is a sixth of a mile long with the bunk-line and water source at opposite ends. The bed-pack is located in the center of the lot.
- These bulls will have put on, at minimum, 100 miles from the time they've been weaned to sale day.
- This ensures that our bulls WILL be in shape to cover many cows in their first breeding season, all while maintaining their body condition.

Udder Scoring:

Here's a look at how we teat and udder score our cows.

Udder Suspension			Teat Size		
Score	Description	Example	Score	Description	Example
9	Very Tight		9	Very small	
7	Tight		7	Small	
5	Intermediate/moderate		5	Intermediate/moderate	
3	Pendulous		3	Large	
1	Very pendulous, broken floor		1	Very large, balloon-shaped

Quarterback has taken the breed by storm. We were fortunate to purchase some semen on this sire and utilize him in our ET program. His semen now commands over \$1,000/unit. Our favorite thing about 789 is his extra length of body. We feel the easiest way to add weight is to add length. It doesn't hurt that he's also a calving ease sire who will add frame and performance as well. His dam, the great Ruby 520, is as prepotent of a Red Angus cow as there is in the industry.

Fundamental is quickly becoming one of our favorite sires to use AI. He transmits all the same great qualities of his sire Seneca, while adding a bit more frame, calving ease, and marbling to his progeny. Of course, it also doesn't hurt to have the 4167 cow as his dam. She was the top donor at Rhodes for many years. The daughters out of Fundamental have us very excited. We're going to aggressively use this sire going forward as we believe he has been criminally underutilized to this point.

The staple of consistency. We continue to use Seneca through AI because his progeny just plain get it done. His females are the deep bodied, easy fleshing cows we covet and his sons are structurally correct and high performing. He will go down in history as one of the great sires of the breed.

We were at the sale when Red Resource commanded \$90,000 as a yearling bull. Still to this day, I have yet to see another Red Angus yearling bull with as much pure muscle through his hip and rear quarter. Known for making exceptionally heavy muscled sons, his daughters are equally impressive in their structural design and udder attachment. Used as an AI sire.

Resolute is a walking herd sire we purchased from Rhodes as their Lot 1 bull in 2022. The 402B cow solidified our decision as she was our favorite cow at Rhodes. In our opinion, he's one of the best, if not the best Red Resource 137E son's produced to date. He is unrivaled for his amount of bone and the big foot he stands down on. This bull is extremely athletic. For the amount of pure power, muscle and body this bull has, he's still upheaded and structurally correct. Watching him in motion is a thing of beauty, he moves so gracefully while carrying all that power.

If you look back at the pedigree of many of the top Red Angus cattle, chances are Epic is in there. We appreciate the progeny he produces with their solid growth, balanced numbers and overall function. He has stood the test of time and we appreciate the longevity he passes on. These cattle just plain get it done.

Lot 1

- This guy has been at the front from the very beginning.
- He's got the frame, length, depth, and scrotal of a big-time herd bull.
- Moderate for birth, with big time ratios for weaning and yearling.
- Dam 7016 is a herd bull producing machine. Every calf she has raised has risen to the top. As an 8-year-old dam, she still maintains an absolutely perfect udder.

Red Angus Bulls

Lot 3

- The first of four percentage Simmental bulls.
- When we chose to implement some Simmental genetics into our herd, this is exactly the kind of bull we hoped to produce. 410 displays all the great traits of Red Angus cattle with a touch more bone and extra muscling.
- He resembles his gorgeous young dam in that she is one of the biggest middled cows we own.

Lot 3 this summer.

- Another bull with a touch of Simmental in him.
- This well-balanced bull is Kent's pick of the pen. Extra middle, big scrotal bull with a killer look from his side profile. This guy will sire terrific replacements and heavy steer calves.
- Dam is a dark red powerhouse with a sweet disposition and a nice tidy udder.

- Heifer bull.
- Moderate framed, dark red bull that is very well built. Level topped, thick made and deep bodied.
- 210 dam is a product of our ET program. We haven't sent in DNA on our 4058 donor, therefore, we're not able to list 210 as a dam. That's why this bull sells without EPDs.

- One of my personal favorites here.
- 446 moves like a cat, stands down on great feet, and has a herd bull crest. We strive to produce bulls that possess this type of athleticism.
- The 7019 cow never fails us. She has raised past high sellers and Lot 1 bulls. She's the kind of cow we could use a pasture full of.

- ET, calving ease bull by Quarterback.
- Extra length of body with a touch more frame than some of his full brothers.
- 491B has staked her claim as our top donor. She has a near perfect udder as an 11-year-old cow and an impeccable ability to raise the great ones.

- Really good bull here that should work on heifers. He's long, level, and excellent footed with a dark face and a super disposition.
- He's almost a spitting image of his _ brother who was our Lot 2 bull in 2023 that is working out in Montana.
- This is the natural calf out of the 5160 cow. She's a 10-year-old cow that carries herself like a 5-year-old. Longevity appears to be her strong suit.

- Large testicle, black-red carrier, with very high libido. When the rest of the bulls are eating, this guy is pacing the fence, trying to figure out how to get in with the heifers.
- What 401 lacks in frame, he makes up for in muscle. This may be the stoutest bull in the sale.
- Dam is a powerful young cow out of the 4408B cow up at MRL in Canada. She's the dam of the \$130,000 MRL Respect bull. Her granddam on the top side is the world famous 113Z cow. The proof is in the puddin here.

- Level, correct made bull with a small, calving ease head.
- Dark red color with adequate depth of body.
- Last chance to get in on these 491B sons, you won't be disappointed.

Red Angus Guide to EPDS and Indexes

ProS... Profitability and Sustainability is an all-purpose index that predicts average economic differences in all segments in the beef supply chain. This index is a combination of the breeding objectives modeled in the HerdBuilder and GridMaster selection indexes. In this index, replacement heifers are retained from within the herd and all remaining progeny are fed out to slaughter and sold on a quality-based grid. Traits included in this index include calving ease, growth, HPG, STAY, Mature Weight, Dry Matter Intake and carcass traits. The resulting index is expressed in dollars per head born (Index/High Value).

HB..... HerdBuilder is a maternal selection index that predicts the economic differences of animals for traits that are important from conception through weaning. Expressed as dollars per head born, HB is calculated based on the scenario that bulls are mated to heifers and cows, replacement heifers are retained and all remaining progeny are marketed at weaning. Traits included in the HB index include Calving Ease Direct, Calving Ease Maternal, Weaning Weight, Milk, Mature Weight, Heifer Pregnancy and Stayability (Index/High Value).

GM..... GridMaster is a selection index that predicts the average economic difference of non-replacement calves through the post-weaning phase of production. GM places selection pressure on growth, feedyard performance and carcass traits. Expressed as dollars per head born, GM is calculated based on the scenario that progeny are fed out to slaughter and marketed on a quality-based carcass grid. Traits included in GM include Average Daily Gain, Carcass Weight, Dry Matter Intake, Marbling, Back Fat and Rib Eye Area (Index/High Value).

CED..... Calving Ease Direct predicts differences in the percent of calves born unassisted out of 2-year-old dams. (Percent/High Value)

BW..... Birth Weight predicts differences in actual birth weight of progeny. (Pounds/Low Value)

WW..... Weaning Weight predicts differences in 205-day weaning weight. (Pounds/High Value)

YW..... Yearling Weight predicts differences in 365-day yearling weight. (Pounds/High Value)

ADG..... Average Daily Gain predicts differences in weight gain between 205 and 365 days of age. (Pounds/High Value)

DMI..... Dry Matter Intake predicts differences in daily feed intake as measured in a feedlot during the post-weaning period. (Pounds/Low Value)

MILK..... Milk predicts differences in weaning weight attributed to the milking ability of the animal's daughters. (Pounds/High Value)

ME..... Maintenance Energy predicts the difference in maintenance energy requirements. (Mcal per Month/Low Value)

HPG..... Heifer Pregnancy predicts differences in the percent of daughters who are able to conceive and calve at 2 years of age following exposure to breeding. (Percent/High Value)

CEM..... Calving Ease Maternal predicts differences in the percent of daughters who are able to calve unassisted as 2-year-old heifers. (Percent/High Value)

STAY..... Stayability predicts differences in the ability of an animals' retained daughters to remain productive in the herd – calve every year – through 6 years of age. (Percent/High Value)

MARB..... Marbling predicts differences in marbling score – amount of intramuscular fat measured at the 13th rib. (Marbling Score Units/High Value)

YG..... Yield Grade predicts differences in USDA Yield Grade, which is calculated using CW, REA and Fat. (Yield Grade Units/Low Value)

CW..... Carcass Weight predicts differences in actual hot carcass weight. (Pounds/High Value)

REA..... Ribeye Area predicts differences in square inches of ribeye area measured at the 13th rib. (Square Inches/High Value)

FAT..... Fat predicts differences in the depth of backfat measured between the 12th and 13th ribs. (Inches/Low Value)
